

MOD Study

Access to Transit and Mobility Hubs Webinar

October 2020

Agenda

1. Overview of RTA MOD Study recommendations on transit access / mobility hubs (Whitney Sherrill / AECOM)
2. RTA Chicago's Access to Transit program, process and lessons learned (Michael Horsting / RTA Chicago)
3. Review of Mobility Hub “best practices” and programs from other cities (Veronica Davis / Nspiregreen)
4. Los Angeles DOT's Mobility Hub initiative and planned regional investment (Robin Aksu / LA DOT)
5. Q & A

Instructions for Webinar Participation

- Q & A: Questions for presenters during Q & A session
- Chat: IT and Admin questions (send directly to Jeromie Winsor)

What is RTA's MOD Study?

What is Mobility-Oriented Development (MOD)?

The diagram illustrates the concept of Mobility-Oriented Development (MOD) using a map background. A large yellow circle represents the MOD area, and a smaller blue circle inside it represents the Transit-Oriented Development (TOD) area. The TOD area is centered on a rapid-transit station. The MOD area extends beyond the TOD area, covering a larger geographic region.

Transit-Oriented Development (TOD)

Focuses on walkable, vibrant mix of uses generally within ½ mile of rapid-transit stations.

Mobility-Oriented Development (MOD)

Builds upon TOD concept, but considers broader (1+ mile) connectivity to residential areas and employment nodes enabled by mix of mobility options such as transit, TNCs, bicycles and scooters

Why is the RTA doing this study?

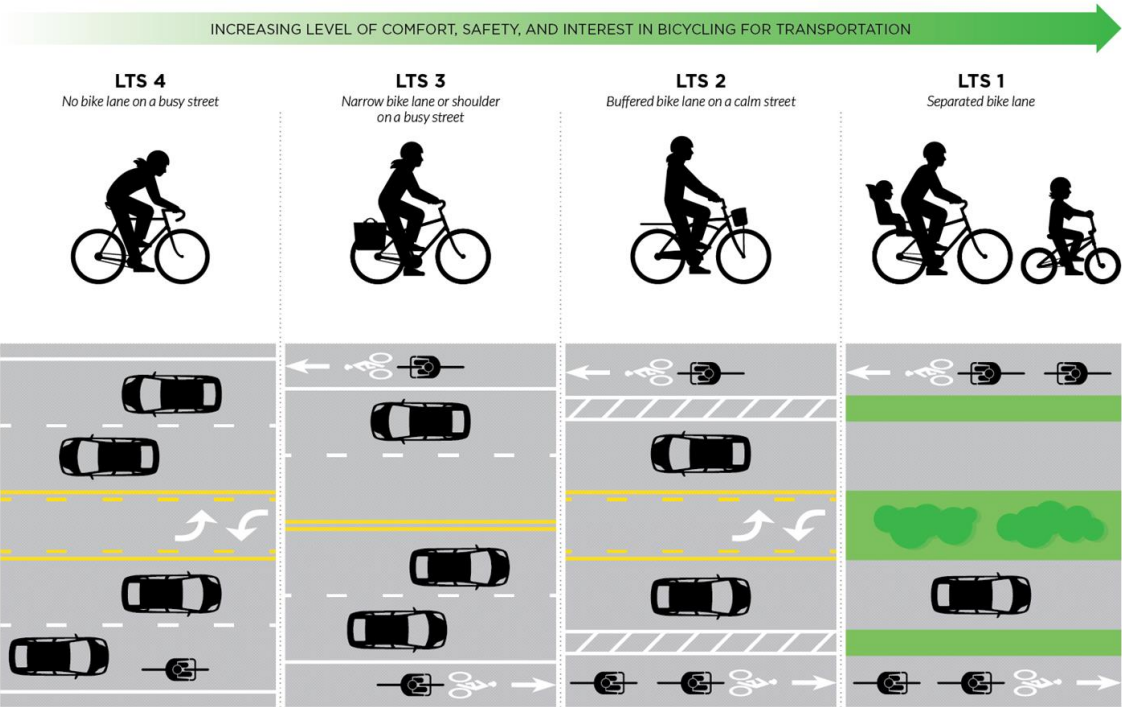

- Introduce “mobility-oriented development” as a framework for fostering sustainable community development around rapid transit corridors.
- Provide guidance on ways that local governments can leverage improved regional transit to benefit and grow their communities.
- Define the mobility connections that will make transit along these corridors convenient to potential customers well beyond the immediate station area.
- Develop targeted action plans for the economic development and mobility enhancements that will best complement regional transit service.

Mode of Emphasis (MoE) Framework

Biking + Micromobility

LEVEL OF TRAFFIC STRESS

Station Scale	Station Elements
At the Station	<ul style="list-style-type: none">E-scootersBike parking
Within the Secondary Transition Area (¼-mile)	<ul style="list-style-type: none">Bike-share station(s)
Within 2 Miles of the Station	<ul style="list-style-type: none">Complete low-stress bike network connecting key destinations

Level of Traffic Stress

Transit + Microtransit

Flex Microtransit Bus, Montgomery County, MD
Source: Montgomery County

Station Scale	Station Elements
<i>At the Station</i>	<ul style="list-style-type: none">• Safe walking / ADA connections between transit stops• Transit amenities / waiting facilities
<i>Within 1 Mile of the Station</i>	<ul style="list-style-type: none">• Convergence of multiple transit routes or connection to a frequent, all-day route / service• Microtransit service

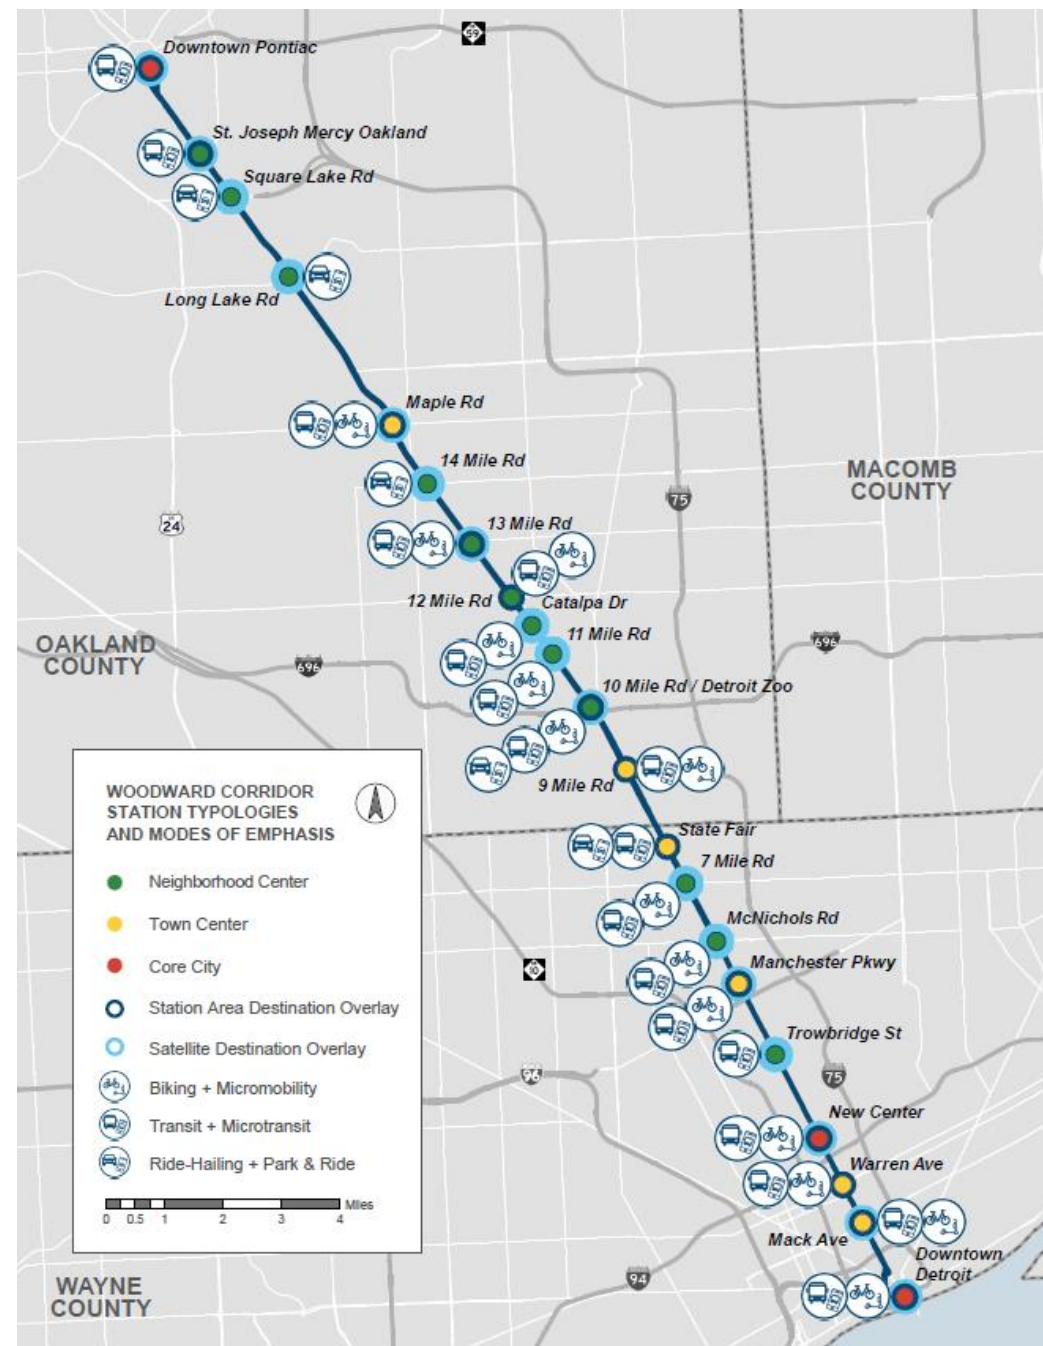

Ride-Hailing and Park & Ride

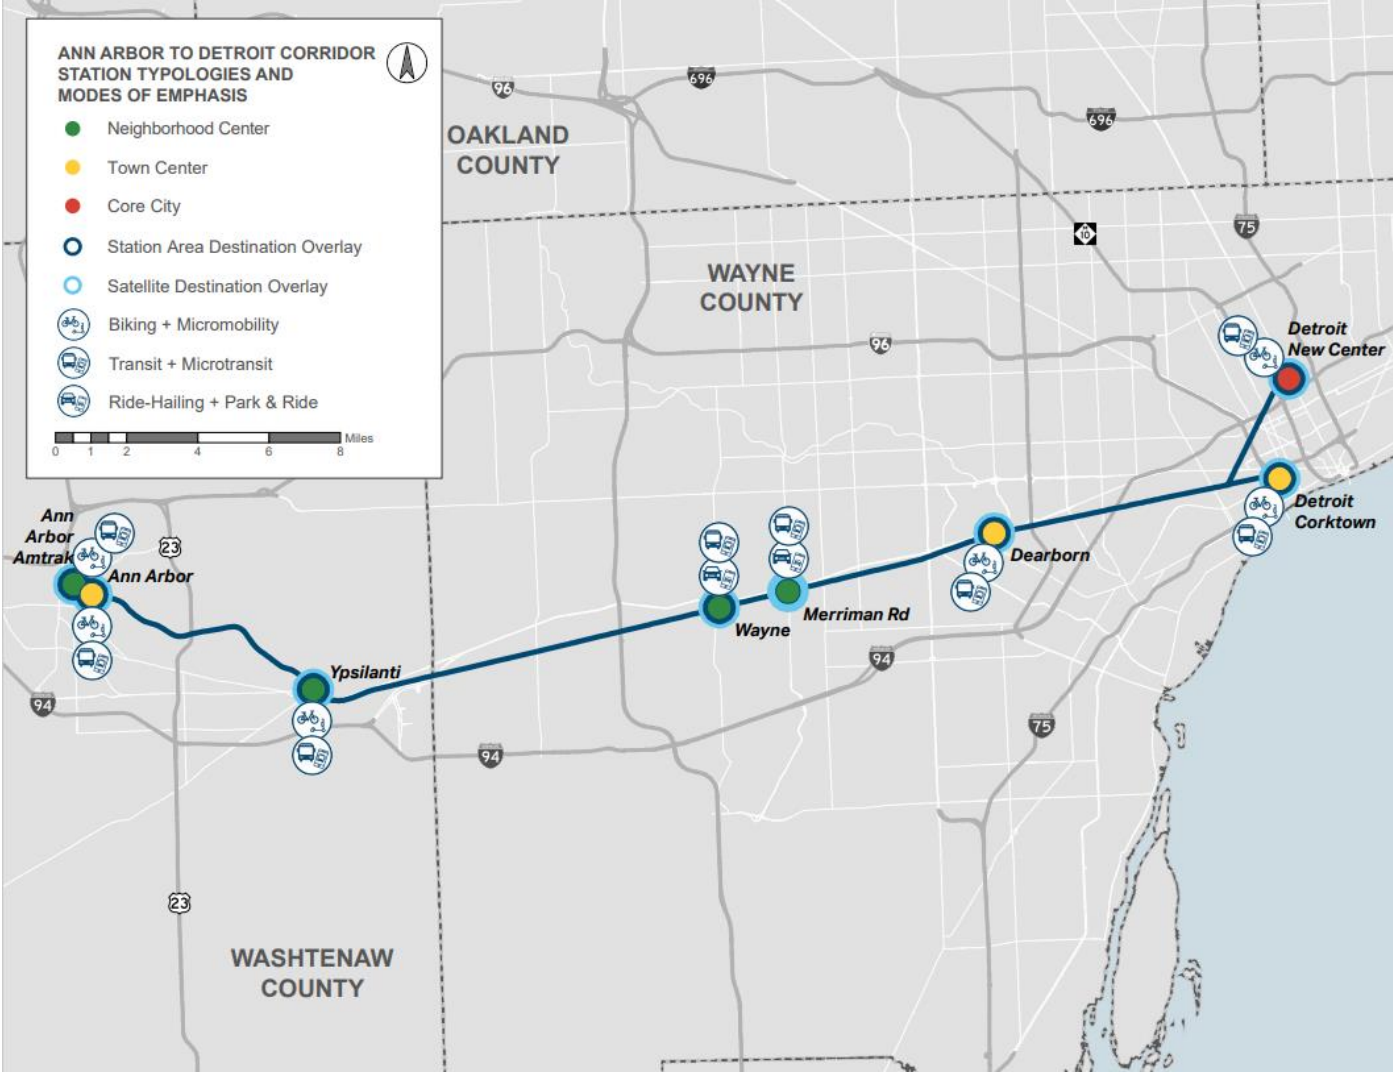

Zipcar Carshare
Source: Crains Detroit Business

Station Scale	Station Elements
<i>At the Station</i>	<ul style="list-style-type: none">• Flexible curb space• Parking facilities• Car-share• Electric vehicle charging
<i>Within the Secondary Transition Area (¼-mile)</i>	<ul style="list-style-type: none">• Existing park and ride lot• Potential park and ride lots
<i>Within the Neighborhood Area (½-Mile)</i>	<ul style="list-style-type: none">• Convenient freeway access

Woodward Corridor MoEs

Rail Corridor MoEs

Examples

- Missing pedestrian crossings ●
- Missing park and ride with rideshare drop-off and pick up zone
- Missing transit service
- Missing sidewalks ●

- Insufficient lighting ●
- Wide crossing distance ●
- Missing real time travel information and bus shelter(s) ●
- Limited sidewalk and crosswalk network connectivity to nearby regional destination ●

- Missing e-scooters and real time travel information
- Limited sidewalk, crosswalk, and bike network connectivity to regional destinations and high short trip demand areas
- Missing microtransit service
- Low transit route frequency
- Long traffic light cycles
- High speed limits

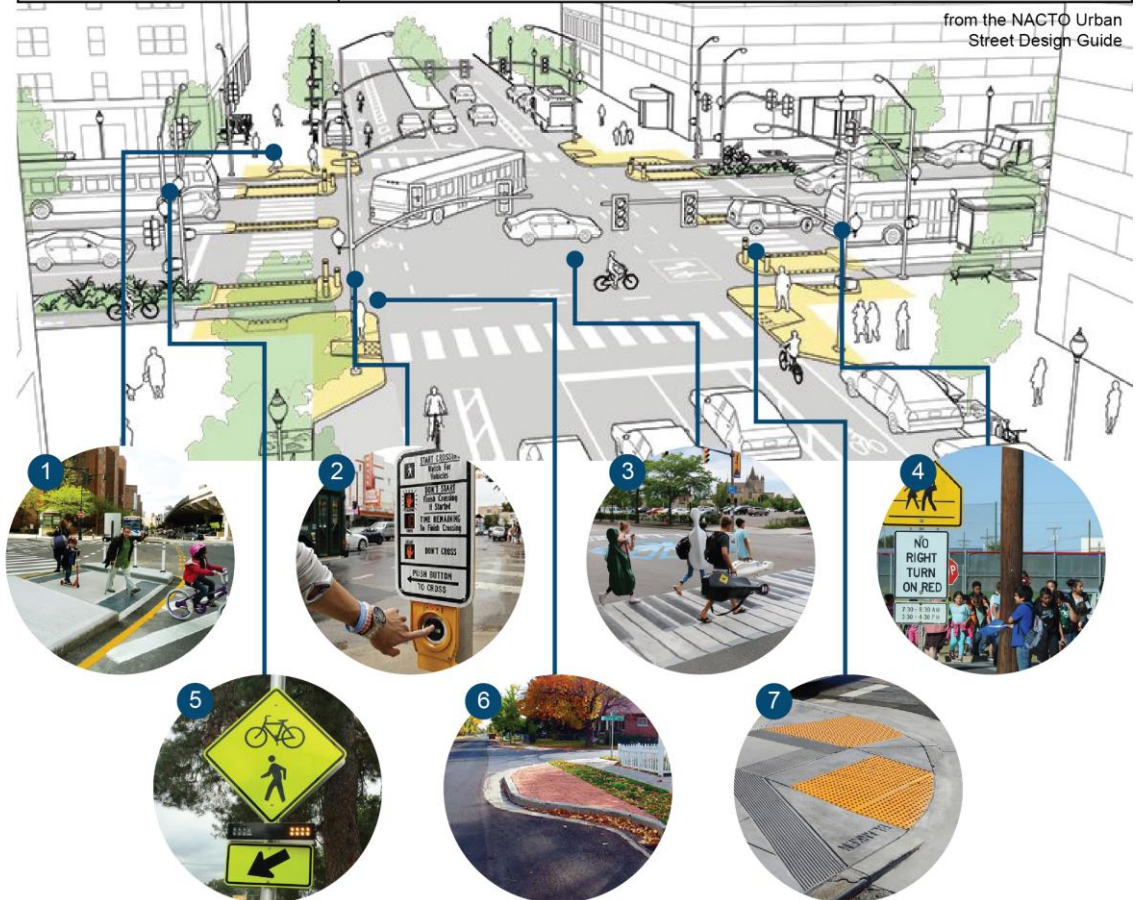

Recommendations

Station Access

- Infrastructure
 - Street reorientation
 - Pedestrian friendly intersections
 - Facility installation
- Regional Partners
 - Develop funding resources
 - Partner to support access to federal funding (BUILD, Capital Investments Grants Program, etc.)

	Treatment	Description
1	Pedestrian Refuge Island	Mid-crosswalk platform that limits pedestrian exposure to oncoming traffic and provides a mid-crossing "refuge" for crossings that may take multiple light cycles
2	Accessible Pedestrian Signals	Pedestrian signals that provide visual and audible crossing cues
3	Painted Crosswalks	Markings on the roadway clearly denoting pedestrian crossings (can incorporate public art)
4	No Right Turn on Red Signalization and Signage	Deters vehicles from turning into the path of crossing pedestrians and allows pedestrians to cross when signaled without interference from turning traffic
5	Rectangular-Rapid Flashing Beacons (RRFBs)	Brightly colored signage with flashing lights that signal when a pedestrian is, or is preparing to, cross the roadway
6	Bump-Outs	Curb extensions into the roadway that decrease crossing distance for pedestrians and may assist with traffic calming
7	ADA-Compliant Curb Ramps	Ramps that provide detectable transitions from the sidewalk to the roadway in compliance with the Americans with Disabilities Act (ADA)

Access to Transit

Michael Horsting

RTA OF NE ILLINOIS ACCESS TO TRANSIT PROGRAM

Mobility Hubs and Transit Access Workshop
October 21, 2020

MOVING YOU

HISTORY OF NEED

HISTORY OF NEED

HISTORY OF NEED

BACKGROUND

- Small-scale bike & pedestrian infrastructure improvements
- Plan implementation assistance for partner communities
- Increase transit ridership
- Reduced vehicle emissions
- Equitable transportation

PROGRAM FUNDING AND BENEFITS

- Two-Step Program:

1. RTA Call for Projects
2. “Bundled” CMAQ Application

- Municipal Benefits

1. Technical Assistance
2. CMAQ Competitiveness
3. RTA Local Match
4. Promotes Multi-modal Transportation

ELIGIBLE IMPROVEMENTS

Bus and Rail Warming Shelters

Crosswalks and Signal Heads

Sidewalk Connections

ELIGIBLE IMPROVEMENTS

Covered Bike Parking

Wayfinding Signage

ADA Accessibility Improvements

ELIGIBLE APPLICANTS

- Applicants must be a municipality or county government who has participated in previous RTA or RPC transit-related planning study
- Participated in a multi-jurisdictional transit agency corridor study

HOW TO APPLY

- Complete RTA application form from [program website](#)
- Statement of community support
- Detailed estimate of project costs
- Concept plan/location map
- Local data:
 - Project area zoning
 - Population and employment densities
 - Transit ridership

CHOOSING A PROJECT

- Aligned with plan goals
- Ability to increase ridership / reduce VMT
- Readiness / ability to implement
- Transit operating agency coordination

PROJECT IMPLEMENTATION

If a project receives funding...

- Local Government takes ownership and manages project to completion
- IGA with RTA to confirm funding and PM obligations
- Provide quarterly updates to RTA
- Invoice RTA for reimbursement

PROGRESS

- Developing 5th phase of program
- Projects funded in 22 communities throughout region
- \$13.7 million in federal, local and RTA funds invested
- 9 Completed projects

PROJECT EXAMPLE – ROLLING MEADOWS

PROJECT EXAMPLE – ROLLING MEADOWS

PROJECT EXAMPLE – MOUNT PROSPECT

Before

PROJECT EXAMPLE – MOUNT PROSPECT

After

GROWING PAINS & RTA FUNDING

RTA Local Match:

Pilot: 20%

2016 Program: 20%

2018 Program: 0%-20%
(and set budget max.)

CURRENT PROGRAM PARAMETERS

Local Match:

- “Highest need” communities continue to receive 20% local match funding from RTA, all others receive a flat 10% of project budget

Project Budgets:

- \$150,000 - \$1 Million

ONGOING CHALLENGES

- Lack of a dedicated funding stream (CMAQ program design)
- Local match funding dependent on RTA Board
- Phase I engineering requirements
 - Lack of professional and fiscal resources
 - Added Phase I engineering funding in 2020

Project

Vision

Provide people more options to get around.

Turn traditional and modern transportation into a seamless experience.

Help people that are unfamiliar with alternative modes to be comfortable to new modes.

Eliminate the unknown for the first mile/last mile for riders.

Provide people with Mobility Hubs to meet all their transportation needs.

Project

Partnerships

The logo for Los Angeles Department of Transportation (LADOT) is displayed in a bold, blue, sans-serif font. The letters 'L', 'A', and 'D' are connected, and the 'O' is a solid circle. The entire logo is enclosed within a yellow rectangular border.

LADOT

The logo for the City of Long Beach is displayed in a blue, sans-serif font. The words 'CITY OF' are in a smaller font size above 'LONG', which is above 'BEACH'. The entire logo is enclosed within a yellow rectangular border.

CITY OF
**LONG
BEACH**

The logo for Metro is displayed. It features a black circle with a white letter 'M' inside, followed by the word 'Metro' in a bold, black, sans-serif font. The entire logo is enclosed within a yellow rectangular border.

Funding

JARC

\$8,350,000

Metro First and
Last Mile

\$1,640,675*

TOTAL

\$9,990,675

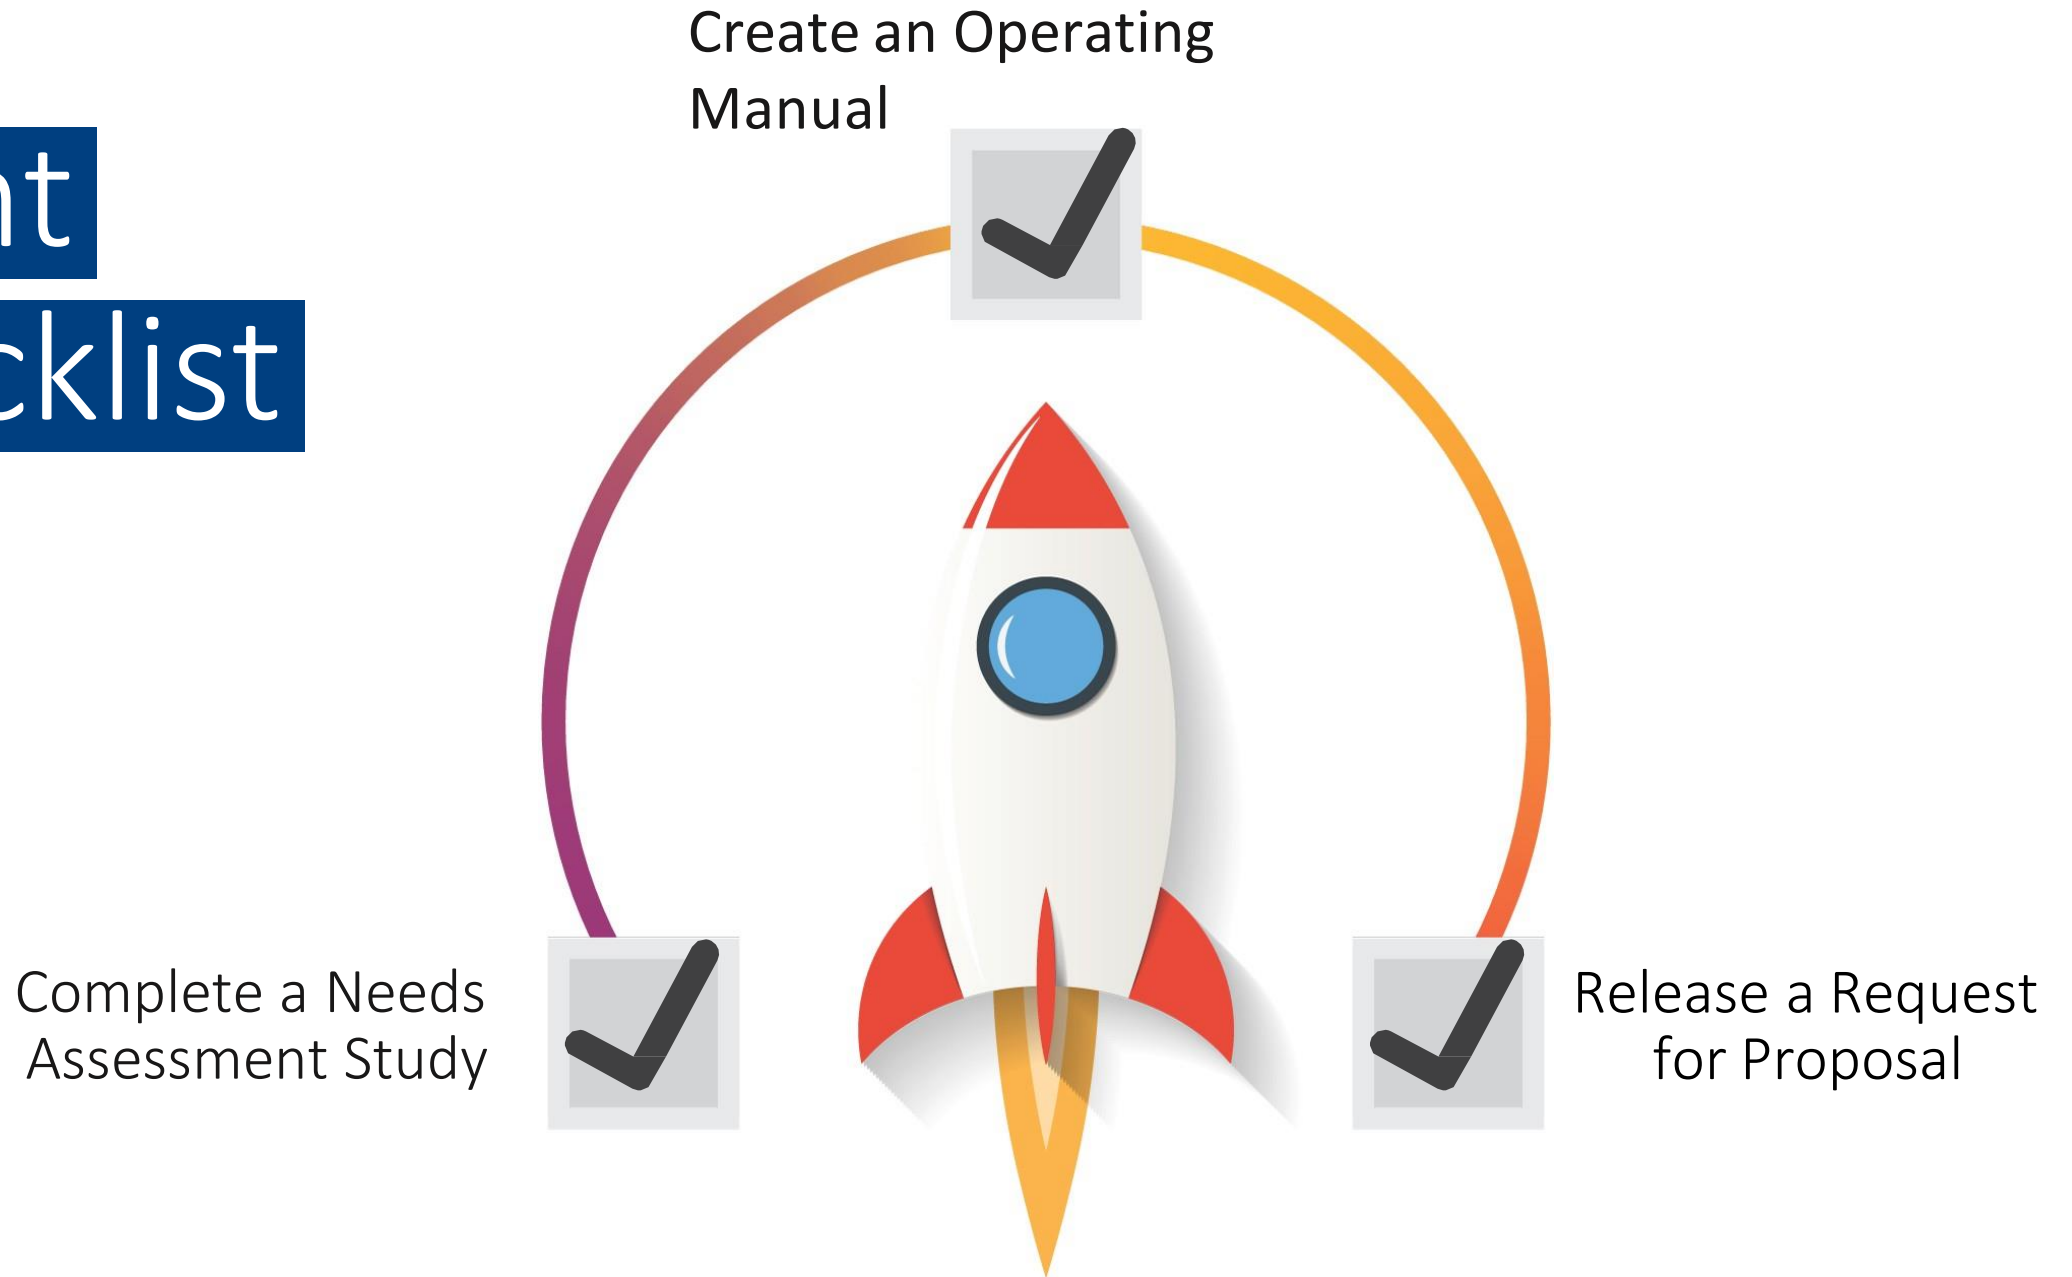

*Funds for Metro First and Last Mile project are committed to downtown Los Angeles services only

JARC Program Goals

- To transport residents of urbanized and non-urbanized areas to suburban employment opportunities regardless of their income
- The purpose of the project is to enhance the access of low-income individuals and welfare recipients to employment centers, job training sites, community colleges, and other educational facilities.
